Sir:

PRELIMINARY AMENDMENT

Amendments to the Claims

- 1. (Currently Amended) A method of operating a surveying instrument (10) placed in a orthogonal XYZ-system at (0,0,0) having a movable unit (20), said instrument defining a sight line (128) that is controllably rotatable around a first axis (50), essentially horizontal, and around a second axis (90), essentially vertical, wherein said second axis (90) may be inaccurately positioned so that it deviates from a true vertical axis, and said first axis (50) may deviate from being orthogonal to the second axis (90); the method comprising the steps of determining at least one of the following group of errors relating to the instrument and/or its location:
- a) a trunnion axis error T as a function of the deviation from 90 degrees between the first axis (50) and the second axis;
- b) a horizontal collimation error C_H , being the deviation between the sight line $\frac{128}{128}$ and the perpendicular angle as related to the first axis $\frac{50}{128}$; and
